

Installing Octave on GNU/Linux

Installing Octave on GNU/Linux

We recommend [using your system package manager to install Octave](#).

On Ubuntu, you can use:

- *`sudo apt-get update && sudo apt-get install octave`*

On Fedora, you can use:

- *`sudo yum install octave-forge`*

Please consult [the Octave maintainer's instructions](#) for other GNU/Linux systems.

"Warning: Do not install Octave 4.0.0"; checkout the "Resources" menu's section of "Installation Issues".
